## Work Experience.

### Senior Fullstack Software Engineer at Raise.

November 2018 - Now - Remote

- Worked on Cap-table management feature that has been used by customers to manage captables worth more than \$1,000,000, which also helped Raise to raise money for their pre-seed round and attract investment from a reputable international Captable management company.
- Implemented the Deal-room feature in Raise, to help users invite investors and raise funds which helped Raise increase it's customers by 150%.
- Add Stripe on the platform to help in managing payment by users, increasing the revenue of the company to 74%
- Add Growthbook for A/B testing of the platform to slowly release features to users, reducing new features bugs affecting users by 60%
- Reduce the initial response time of the platform by over 50% by using prefetching and caching which increased the customer retention by 30%
